Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The method uses PCR to amplify these regions followed by sequence-specific oligonucleotide probe hybridisation (SSOPH) using the probes AAX79365-X79429. SSOPH allows detection of polymorphisms that predict differences at a single amino acid level thus reducing errors and improving the chance of successfully matching tissues.
The sequences given in AAT41811-20 represent probes which were used to resolve the human leukocyte antigen (HLA) DRB1 atleles, DRB1*08, *12 and *1404. This probe sequence hybridises to the Gly86 coding region found in alleles *0801, *0802, *0803 and 0805. These probes may be used in the method of invention which concerns HLA typing of a sample for an unknown pair of alleles. The pair of alleles comprises one of two known types which have the same overall set of polymorphisms but have a different distribution of polymorphisms between their two alleles. The
                                                                                                                                                                                Human leukocyte antigen typing of tissue samples - using allele-specific amplification to distinguish allele pair
                                                                                                                                                                                                                                                                                                                                01-MAR-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       alleles will be amplified and potentially detected by hybridisation with care probe. In the second stage, the group or basic type identified determines which set of allele specific primers will be used. The first of the two primers comprises an opt. labeled sequence common to each allele of the group identified in the first stage but different from other groups identified in stage one. The second primer may be a mixture of different labeled primers, complementary to two or more sequences within the group, or the amplification may be performed with only one second primer to detect the presence of a single group of alleles. In the third stage the specific allele is determined. This may be done by amplification or hybridisation using a radiolabelled probe. The method may be used for tissue matching, identifying disease susceptibility, etc. The method of the invention esp. distinguishes between DOB1*0304/DOB1*03032 and DOB1*0301/DOB1*0302.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           method comprises selectively amplifying the DNA of just one allele of the unknown pair and analysing the amplified DNA to determine which polymorphisms are present in that allele, and therefore assigning the unknown pair to the known type having that allele. The method comprise three test stages. The first stage is to establish the number of alleles present in each sample. Primers corresponding to fairly well conserved regions of a locus will increase the likelihood that unknown
                                                                                           Oligo:nucleotide probes and primers and particularly for tissue typing for bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAV16578 standard; DNA; 12

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         probe which undergoes sequence-specific hybridisation with an HLA-DR beta consensus sequence at positions 61-64. The probe contains a labelling substance other than a nucleotide sequence, which facilitates detection of the probe. The HLA sequence of a subject is PCR amplified, and a probe that recognises an allelic polymorphism at a selected HLA locus is contacted with the amplified product. This first probe recognises a HLA-DR beta-allelic polymorphism. A second (different) probe is brought into contact with a second sample of the amplified DNA in a separate reaction, and hybridisation detected. The probes and primers are used for HLA typing, e.g. for tissue, especially bone
                                                                                       The present invention relates to human leukocyte antigen (HLA) typing. The method involves detecting polymorphic residues by sequence specific oligonucleotide probe hybridization (SSOPH) with labeled oligonucleotide probes.
                                                                                                                                                                                   Human leukocyte antigen typing by amplifying a sample followed by sequence specific oligonucleotide hybridization with labeled oligonucleotide probes that hybridize with a series of known control DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human;
SSOPH;
                                                                                                                                                                                                                                                                                                                            27-JUN-1990;

                                                                                                                                     The sequence is that of the hybridising region of tailed probe DRB15 for use in a method for determining HLA-DR beta sub-type in a nucleic acid sample. The method allows specific nucleic acid sequences of the second exon of HLA-DR beta genes to be amplified then probed for identification of polymorphic sequences. The amplified DNA is useful for typing homozgous or heterozygous samples from a variety of sources and for detecting allelic variants not distinguishable by serological methods. The typing system can be used in a reverse dot blot format which is simple and rapid to perform, produces detectable signals in minutes and can be utilised in tissue typing, determination of individual identity and isense susceptible individuals. Preliminary testing shows that the probe is more preferred than others. The probe is see also AAQ26092-Q26367.

The method allows specific nucleic acid sequences of the second exon of HLA-DR beta genes to be amplified then probed for identification of polymorphic sequences. The amplified DNA is useful for typing homozgous or heterozygous samples from a variety of sources and for detecting allelic variants not distinguishable by serological methods. The typing system can be used in a reverse dot blot format which is simple and rapid to perform, produces detectable signals in minutes and can be utilised in tissue typing, determination of individual identity and identifying disease susceptible individuals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       containing gene polymorphisms as alloantigens have been immobilised as primers for amplification of cleaved nucleic acids relating to gene polymorphisms. The method is useful for judging HLA genotypes of individuals by determining immunogenetic differences before transplanting between them, providing genetic information to decide compatibility of organ and tissue for transplantation e.g. of bone marrow, kidney, liver, pancreas, Langerhans islet in pancreas and cornea, susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a typing kit for judging human leukocyte antigen (HLA) genotype of a sample by hybridising a substrate on which 10-24 base oligonucleotides (ABL30512-ABL31809) originating in the sequences of genes e.g. belonging to HLA class I antigens on human genome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human leukocyte antigen (HLA) typir of individuals e.g. by determining transplanting between them -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence is that of the hybridising region of tailed probe DRB147 for use in a method for determining HLA-DR beta sub-type in a nucleic acid sample. The method allows specific nucleic acid sequences of the second exon of HLA-DR beta genes to be amplified then probed for identification of polymorphic sequences. The amplified DNA is useful for typing homozogous or heterozygous samples from a variety of sources and for detecting allelic variants not distinguishable by serological methods. The typing system can be used in a reverse dot blot format which is simple and rapid to perform, produces detectable signals in minutes and can be utilised in tissue typing, determination of individual identity and identifying disease susceptible individuals. It has not yet been tested. See also AAQ26092-Q26367.
The invention relates to a typing kit for judging human leukocyte and (HLA) genotype of a sample by hybridising a substrate on which 10-24 oligonucleotides (ABL3012-ABL31809) originating in the sequences of genes e.g. belonging to HLA class I antigens on human genome and containing gene polymorphisms as alloantigens have been immobilised a primers for amplification of cleaved nucleic acids relating to gene polymorphisms. The method is useful for judging HLA genotypes of individuals by determining immunogenetic differences before transplan
                                                                                                                                                                                                                                       Claim 10; Page 151; 345pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABL30817 standard; DNA; 17

                                   The sequence represents a sequencing primer for DNA encoding the Fusari fungal enzyme, glucanase. Glucanase, endochitinase and exochitinase are polypeptides with cell-wall degrading activity, derived from Fusari fungal genes. The associated nucleic acids can be used to produce transgenic plants which are resistant to plant pathogens, particularly Fusarium species. They can also be used to isolate homologous genes fro fungi to obtain genes which protect host cells, including fungi, bacter and plants against related fungal pathogens. The polypeptides, especial chitinases and glucanases, are useful for degrading seafood waste, such as shells that contain chitin, or for chemical modification of chitin o

                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a typing kit for judging human leukocyte antigen (HLA) genotype of a sample by hybridising a substrate on which 10-24 base oligonucleotides (ABLJ0512-ABLJ1809) originating in the sequences of genes e.g. belonging to HLA class I antigens on human genome and containing gene polymorphisms as alloantigens have been immobilised as primers for amplification of cleaved nucleic acids relating to gene polymorphisms. The method is useful for judging HLA genotypes of individuals by determining immunogenetic differences before transplanting between them, providing genetic information to decide compatibility of organ and tissue for transplantation e.g. of bone marrow, kidney, liver, pancreas, Langerhans islet in pancreas and cornea, susceptibility of pancreas, Langerhans islet in pancreas and cornea, susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 10; Page 139; 345pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a typing kit for judging human leukocyte antigen (HLA) genotype of a sample by hybridising a substrate on which 10-24 base oligonucleotides (ABL30512-ABL31809) originating in the sequences of genes e.g. belonging to HLA class I antigens on human genome and containing gene polymorphisms as alloantigens have been immobilised as primers for amplification of cleaved nucleic acids relating to gene polymorphisms. The method is useful for judging HLA genotypes of individuals by determining immunogenetic differences before transplanting between them by determining immunogenetic differences before transplanting that the determining immunogenetic differences before transplanting the determining immunogenetic differences before transplanting that the determining immunogenetic differences before transplanting the determining immunogenetic differences before transplanting the determining immunogenetic differences before transplanting the determining the determining immunogenetic differences before transplanting the determining the

                             histocompatibility complex (MHC), esp. for typing donors for bone marrow transplants, involves determining if the donor tissue HLA-DR alleles are selected from the gp.: HLA-DRW5CC, DR13a,b, DR3a,n, DR5a-e, DRNewl, DR6a, DR8a-d, DRW55a-c, DR4a-f, DR7, DR9, DR2a-c B3, DR2a-d B1, DR10 and DR1a-c. The method uses PCR to amplify these regions followed by sequence-specific oligonucleotide probe hybridisation (SSOPH) using the probes AAX79365-X79429. SSOPH allows detection of polymorphisms that predict differences at a single amino acid level thus reducing errors and improving the chance of successfully matching tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for use in a method for determining HLA-DR beta sub-type in a nucleic acid sample. The method allows specific nucleic acid sequences of the second exon of HLA-DR beta genes to be amplified then probed for identification of polymorphic sequences. The amplified DNA is useful for typing homozgous or heterozygous samples from a variety of sources and for detecting allelic variants not distinguishable by serological methods. The typing system can be used in a reverse dot blot format which is simple and rapid to perform, produces detectable signals in minutes and can be utilised in tissue typing, determination of individual identity and identifying disease susceptible individuals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tissue typing; human leukocyte antigen; HLA; MHC; donor; allel major histocompatibility complex; bone marrow transplant; prim amplification; polymerase chain reaction; probe; polymorphism; sequence-specific oligonucleotide probe hybridisation; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance."
The first strand cDNA was primed with a biotinylated oligo-dT-NotI primer (5'-biotin-AACCCGGCTCGAGCGGCCGCTTTTTTTTTTTTTTTT-3').

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic search, using sw model

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     The specification describes a method of identifying a genetic mark associated with a genetic locus conferring resistance to fusiform rust disease in a family of trees of the genus Pinus. The method comprises obtaining a sexually mature Pinus parent tree exhibiting
                                                                                                       genus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RAPD analysis was used to study resistance to particular strains Cronartium quercuum f.sp. fusiforme (Cqf), the causative agent of fusiform rust disease, in loblolly pine (Pinus taeda). A putative heterozygous mother tree (clone 10-5) and two open pollinated daughters (half-sib clones 152-231 and 152-257) were crossed to a highly susceptible pollen parent. Progeny were challenged with inoculum from various aeciospore lines. It was found that the marker amplified by the 10-mer primer in AAQ99824 was predictive resistance to inoculation with single Aeciospore line 2-36 in
 resistance to fusiform rust trees of the parent by self

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                allele containing the target polymorphisms, (b) labelling the single-stranded nucleic acid molecules, immobilising oligonucleotide probes, each specific for a known polymorphism, on a support and (c) detecting fully complementary duplexes formed between the labelled single-stranded nucleic acid molecules and the immobilised probes. The method is used for determining differences and correspondences in polymorphisms between individuals, tissues or organs by comparing hybridisation patterns produced by the above method. The method uses probe arrays rather than requiring sequential hybridisation and removal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          progeny trees for a number of genetic markers, identifying genetic markers segregating in a Mendelian ratio and showing linkage with other genetic markers, measuring resistance to fusiform rust disease in multiple progeny trees and correlating the presence of resistance to fusiform rust disease with at least one marker identified in the previous step. The method is useful for determining the genetic basis previous step. The method is useful for determining the genetic basis
                                                                                                                                                    HLA-C allele by detecting polymorphisms using the primers AAX23371-X23380. The method involves (a) preparing single-strand nucleic acid molecules corresponding in sequence to the portion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     previous step. The method is useful for determining the genetic basis of resistance to fusiform rust disease and for producing trees of the Pinus genus that are resistant to the disease. The present primer was used in the method of the invention to identify and amplify resistance
                                                                                                                                                                                                                      Claim

                                                                                                                                     flavones that are useful as pharmaceuticals, e.g. in cancer treatment, as biologically active substances, e.g. to improve the immune defence system. Oligonucleotide fragments of (I) are used as probes and primers
                                                                                                                                                                     This invention describes a novel nucleic acid (I) that encodes flavone synthase II (FNSII) which has anticancer and immunomodulatory activity. FNSII catalyses conversion of naringenin to apigenin (I) is used to produce transgenic ornamental plants that have targeted alterations in flower color, also altered content/distribution of flavones in leaves, flowers and other tissues, e.g. increased resistance properties or symbbotic capacity. FNSII expressed by (I) is used in synthesis of

FNSII catalyses conversion of naringenin to apigenin. (I) is used to produce transgenic ornamental plants that have targeted alterations in flower color, also altered content/distribution of flavones in leaves, flowers and other tissues, e.g. increased resistance properties or symbiotic capacity. FNSII expressed by (I) is used in synthesis of flavones that are useful as pharmaceuticals, e.g. in cancer treatment,

Based on different kinetics of induction response, these genes were classified into four categories, class I, II, III and IV response genes. The SA-inducible genes are useful for making transgenic plants with enhanced pathogen resistance. The plants incorporating these genes show reduced susceptibility to fungal pathogens. The present sequence is an upstream primer APII used in differential display PCR reactions along with downstream primers T12MG or T12MC to identify tobacco

```
differentially expressed genes, or of their encoded proteins, can be used to identify cells as belonging to the monocyte lineage. Cells containing these genes can be used in active immunotherapy (or to stimulate production of a population of antigen-specific effector cells) and vectors containing them are used in gene therapy. Co-administration of tumour antigens and APC-associated costimulatory factors ensures adequate antigen presentation to endogenous APCs and upregulates the APCs for the presentation of co-stimulatory signals, migration to T cell-rich sites, secretion of T cell growth factors and secretion of chemokines for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19-JUN-1998;
19-JUN-1998;
19-JUN-1998;
                                                                                                                                                                                                     They may be used in vaccines to induce an immune response, particularly against a tumour antigen; to modulate the genotype of an APC; to screen for agents that modulate expression of differentially expressed genes in an APC; and as hybridisation probes/amplification primers for the diagnosis, prognosis and monitoring of diseases related to abnormal expression of these genes. Detection of the dendritic cell
                                                                                                                                                                                                                                                                                                                                                                              preferentially or differentially expressed in dendritic cells, while other transcripts correspond to novel genes. Antigen-presenting cell (APC)-associated costimulatory factors play an important role in the activation of the cytotoxic immune response, particularly against tumour cells. Tumour antigen presentation via the MHC (major histocompatibility complex) and subsequent recognition by T-cell receptors is alone
                                                                                                                                                                                                                                                                                                                           insufficient to activate a robust cytotoxic immune response that can lyse the tumour cells, immunostimulatory cofactors also being require for efficient activation of cytotoxic T-lymphocytes (CTLs). Nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              against a tumour antigen; to modulate the genotype of an APC; to screen for agents that modulate expression of differentially expressed genes in an APC; and as hybridisation probes/amplification primers for the diagnosis, prognosis and monitoring of diseases related to abnormal expression of these genes. Detection of the dendritic cell differentially expressed genes. Or of their conclusions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (APC)-associated costimulatory factors play an important role in the activation of the cytotoxic immune response, particularly against tumour cells. Tumour antigen presentation via the MHC (major histocompatibility complex) and subsequent recognition by T-cell receptors is alone insufficient to activate a robust cytotoxic immune response that can lyse the tumour cells, immunostimulatory cofactors also being required for efficient activation of cytotoxic Tlymphocytes (CTLs). Nucleic acid sequences identified using the SAGE tags have several potential uses. They may be used in vaccines to induce an immune response, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    differentially expressed genes, or of their encoded proteins, can be used to identify cells as belonging to the monocyte lineage. Cells containing these genes can be used in active immunotherapy (or to stimulate production of appulation of antigen-specific effector cells) and vectors containing them are used in gene therapy. Co-administration of tumour antigens and APC-associated costimulatory factors ensures adequate antigen presentation to endogenous APCs and upregulates the APCs for the presentation of co-stimulatory signals, migration to T cell-rich sites, secretion of T cell growth factors and secretion of chemokines for recruitment of immune effector cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        differentially expressed in monocyte-derived dendritic cells compared with monocytes. Some of the transcripts correspond to known genes or ESTs (expressed sequence tags) which were previously unknown to be preferentially or differentially expressed in dendritic cells, while other transcripts correspond to novel genes. Antigen-presenting cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 10

cc differentially expressed in monocyte-derived dendritic cells compared cc with monocytes, Some of the transcripts correspond to known genes or CC ESTs (expressed sequence tags) which were preferentially unknown to be preferentially or differentially expressed in dendritic cells, while CC (APC)-associated costimulatory factors play an important role in the cativation of the cytotoxic immune response, particularly against tumour cells. Tumour antigen presentation via the MHC (major histocompatibility complex) and subsequent recognition by T-cell receptors is alone cells. Tumour activation of cytotoxic immune response that can cells is immune response that can cells sequences identified using the SAGE tags have several potential uses. CT They may be used in vaccines to induce an immune response, particularly against a tumour antigen; to modulate the genotype of an APC; to screen ce for agents that modulate expression of differentially expressed genes. Detection of these genes can be used in active inmunocyte lineage. Cells containing them are used in gene therapy. (or to stimulate cells containing them are used in gene therapy. (or co-administration of co-stimulatory signals, migration of chemokines for the presentation of co-stimulatory signals, migration of chemokines for the secretion of T cell growth factors and secretion of chemokines for the secretion of cell growth factors and secretion of chemokines for the secretion of cell growth factors and secretion of chemokines for the secretion of cell growth factors and secretion of chemokines for the secretion of cell growth factors and secretion of chemokines for the secretion of cell growth factors and secretion of chemokines for the secretion of cell growth factors and secretion of chemokines for the secretion of chemokines for the secretion of cell growth factors and secretion of chemokines for the secretion of chemokines for cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-JUN-1998;
